

AQUA SEAL

Fast Reacting Chemical Grout

Easily Stops Money From Going Down The Drain!

Infiltration Before

Aqua Seal Stopping Leak

Aqua Seal is an extremely reactive two component hydrophobic polyurethane water stop system that can be injected into flowing water. **Aqua Seal** is an exceptionally fast reacting (3-5 seconds), quick sealing and high early strength grout that is pumped under pressure. **Aqua Seal** is designed to stop high infiltration sources in precast or brick structures and can stop leaks in excess of 50 G.P.M. **Aqua Seal** comes packaged with twelve 600ml dual component urethane caulk tubes along with twelve static mixers. Since only a heavy duty dual component caulking gun is required, cities can easily install Aqua Seal with their "in-house" maintenance crews. A user-friendly pneumatic gun is also available to

AQUA SEAL

How much money can Aqua Seal save you?

One manhole leaking 5 G.P.M. will leak 7,200 gallons per day!
If the cost of treating wastewater is \$2.50 per thousand gallons, then this single
manhole with a 5 G.P.M. leak cost \$6,570 per year.

That is \$6,570 per year forever.

Installation Instructions

1. Locate leak and drill a 5/8" hole. Intersect leak path at 45°.
2. Place black lock nut over static mixer and tap mixer into drilled hole.
3. Remove cap from tube set.
4. Remove top of nozzle by placing a screwdriver in opening and snap off.
5. Pull back release on dual component caulk gun and place tube set into gun. Be careful to keep tubes vertical.
6. Attach static mixer to tube set and screw locknut on static mixer onto tube set.
7. Pump Aqua Seal into drilled hole until refusal or until tube is empty.
8. Quickly release tab on caulk gun then remove tubes.
9. Snap off static mixer when cooled.
