## TIPS

1) Before lowering the digester into the well, add one or two whole bottles of **Dawn Dish Detergent** to the wet well. This masks the odor on initial start up and allows you to leave the hatch open for observation.

(There will be an odor for a short period of time until gases are oxidized)

2) For 4 hp units, attach a 3/8ths **poly** rope to the chain provided on the top of the digester. This will allow the help of another person to help lower the unit into the well. Secure the excess rope to the float hooks in the well using zip ties. The Big Bertha Digester weighs approx. 110 to 120 Pounds.

3) Always secure excess hose in the station using zip ties provided.

4) Place the Black Box containing the blower OUT of Direct Sunlight if possible.

5) Clean Air Filter every 30 days or as required!

6) Make sure the hose coming out of the air vent is not pinched or rubbing another object.

7) Locate the blower as far away as possible from any opening in the lift station. This prevents the blower from picking up excess moisture and air borne grease molecules causing the blower to over-heat.

8) Turn the blower OFF when ever cutting grass or weed eating nearby!

## Installation Guide For ALL Little John Digesters

**Solving the World's Water Problems**

This installation guide is to be completely through **BEFORE** any installation takes place.

This guide is to be used with the following Little John Digesters:  
LJD1001-00 (1 HP Unit)  
LJD1001-22 (2 HP Unit)  
LJD1001-33 (3 HP Unit)  
BB-1001-00 (4 HP Unit)

**Technical Support is available  
Monday - Friday 7 a.m. to 5 p.m. CST**

# Little John Digester Step by Step Installation Guide

## Tools Required

*Tools Required: None; everything is included but the electrician!*

## Step by Step Guide

### Step 1

Have a **CERTIFIED** Electrician wire the blower to proper voltage

### Step 2

Turn blower on and check for **PROPER Rotation BEFORE** connecting Air Feed Hose

### Step 3

Feed Green Flex Hose through air vent in wet well. \*\*\* **BE CAREFUL NOT TO GET TRASH IN HOSE!** This will prevent the digester from operating properly.

### Step 4

Connect part **C** to the Top of the DIGESTER

### Step 5

Using the hose, **SLOWLEY LOWER** the Digester into the well. \*\*\* Locate the digester as close as possible to the pumps. Secure Excess hose with zip ties provided.

Secure Excess hose with zip ties provided.

### Step 6

Stand the Blower Box on end and attach air filter assembly pipe to blower. \*\*\***DO NOT OVER TIGHTEN.**

### Step 7

Insert Part **E** on the Green Hose into Part **D** on the Blower.
