Re: Little John Digester Ozonator Purchase

Dear Mr. Titus:

In October, 2013, our organization purchased from your company a Little John Ozonator. We would like to state, that we are exceptionally pleased with the equipment and its' performance.

You oversaw the installation of the Little John at our sewer grinder site on Friday, October 25<sup>th</sup>. One part in the equipment had to be replaced so that to begin the equipment was aerating only, but the company responded quickly to the need for the replacement part and it was installed on the 31<sup>st</sup>.

Did the Little John do what we had been told that it would do? Yes, even without the ozonator working, the H<sub>2</sub>S amounts were drastically reduced. Once the ozonator was up and working, the H<sub>2</sub>S amounts dropped to 7 to 9 parts per million [ppm] as a weekly average. Prior to installing the Little John, we were chlorine treating our sewage in order to reduce the H<sub>2</sub>S in the lines. That worked to some extent, but we were still over all standards. The Little John was paid for within six months because we were able to totally eliminate the chlorination into the sewer lines. In addition, damage to our wet well and our storage facilities from the chlorine was eliminated which saved us more money.

FHWSO is a small water and sewer district that serves the needs of a 290 unit condominiumized subdivision. The subdivision [Falcon Heights] is located outside the Urban Growth Boundary of Klamath Falls, Oregon.

Thank you for your prompt response to figuring out a solution to our H<sub>2</sub>S problem. Also, thank you for being involved in the installation.

Sincerely,
